

# PLUS<sup>2</sup>

Circular saw blade for cutting of wood based panel boards

## High performance with excellent finishing

The new range of FREZITE saw blades for MDF and HDF panel cutting, called PLUS<sup>2</sup>, is a real success in terms of performance. This new saw blade has been developed for the efficient cutting of panels with high-density, batch or single-plate. The PLUS<sup>2</sup> features a high resistance carbide tip grinded with triple chip flat tooth, allowing longer cutting life and reduced machine downtime. Provides a clean cut, of excellent quality. To ensure good finishings on the underside, it must be used together with a scoring saw blade.

### APPLICATION

- For cutting MDF and HDF with high density coating.
- For single boards and stacks of boards.

### MACHINES

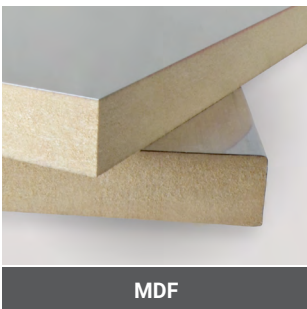

- For panel sizing machines, etc.

### TECHNICAL INFORMATION

- With triple chip flat grinded carbide teeth (HW).
- Saw blade produced extra wear resistance and extra-long lifetime.
- For finish cut quality with scoring saw blade.

### ADVANTAGES

- High wear resistance.
- Longer running time.
- Reduced machine downtime.
- Productivity gains.
